

Identifying the occupants of Nest #10

The RFID was offline after the box was pecked and it filled with water... drat. But this data is interesting.

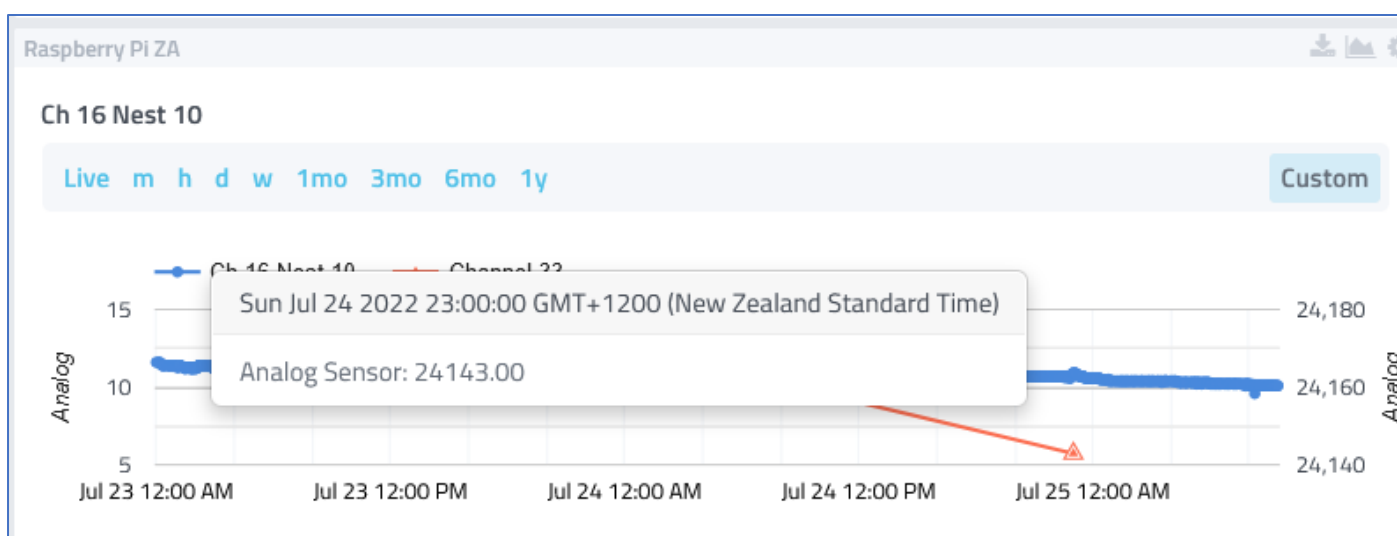

Birds seen in the nest:

Sex	microchip	weight	History – previous nest 2021
Male	24164	1200g	Nest 10
? male	4008	1250g	
Female	17275	970g	Nest 4
Male	24143	1170g	Whati from nest 18
Male	34109	1500g	Nest 21
??	Not microchipped		Seen on cam and an unchipped (unreadable) bird found in the nest with eggs

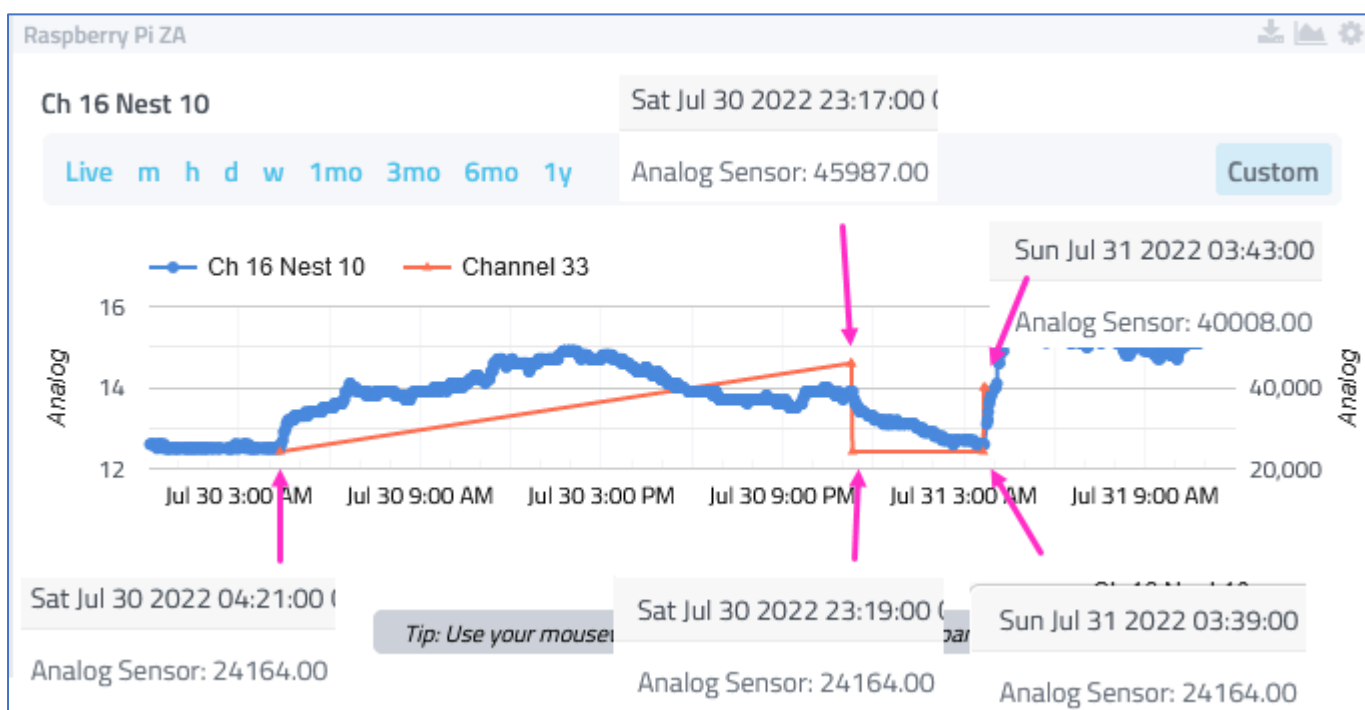

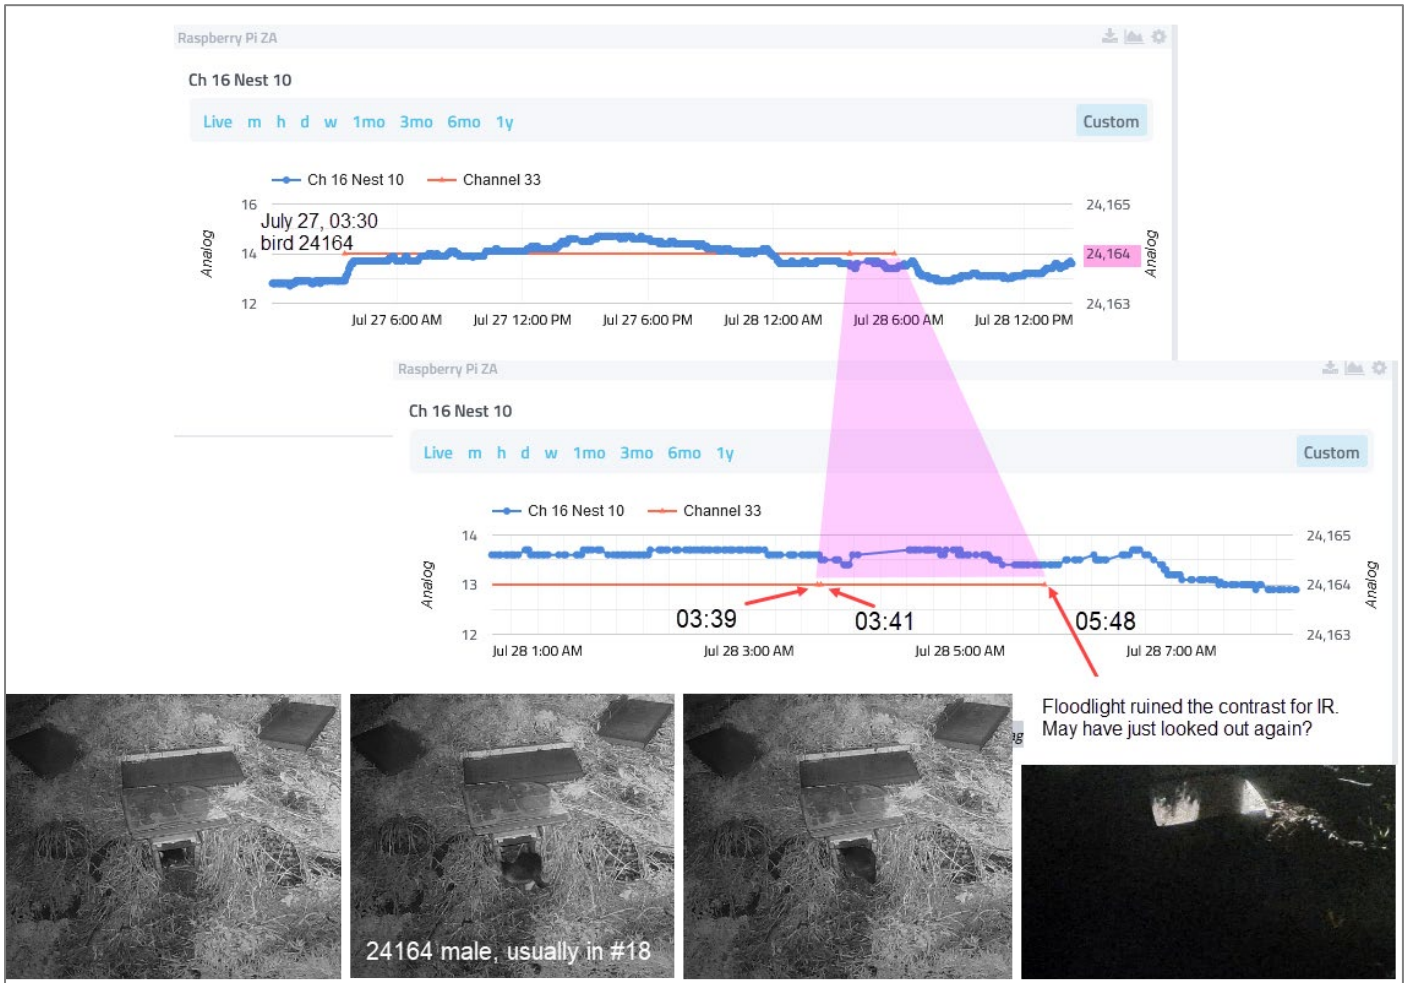

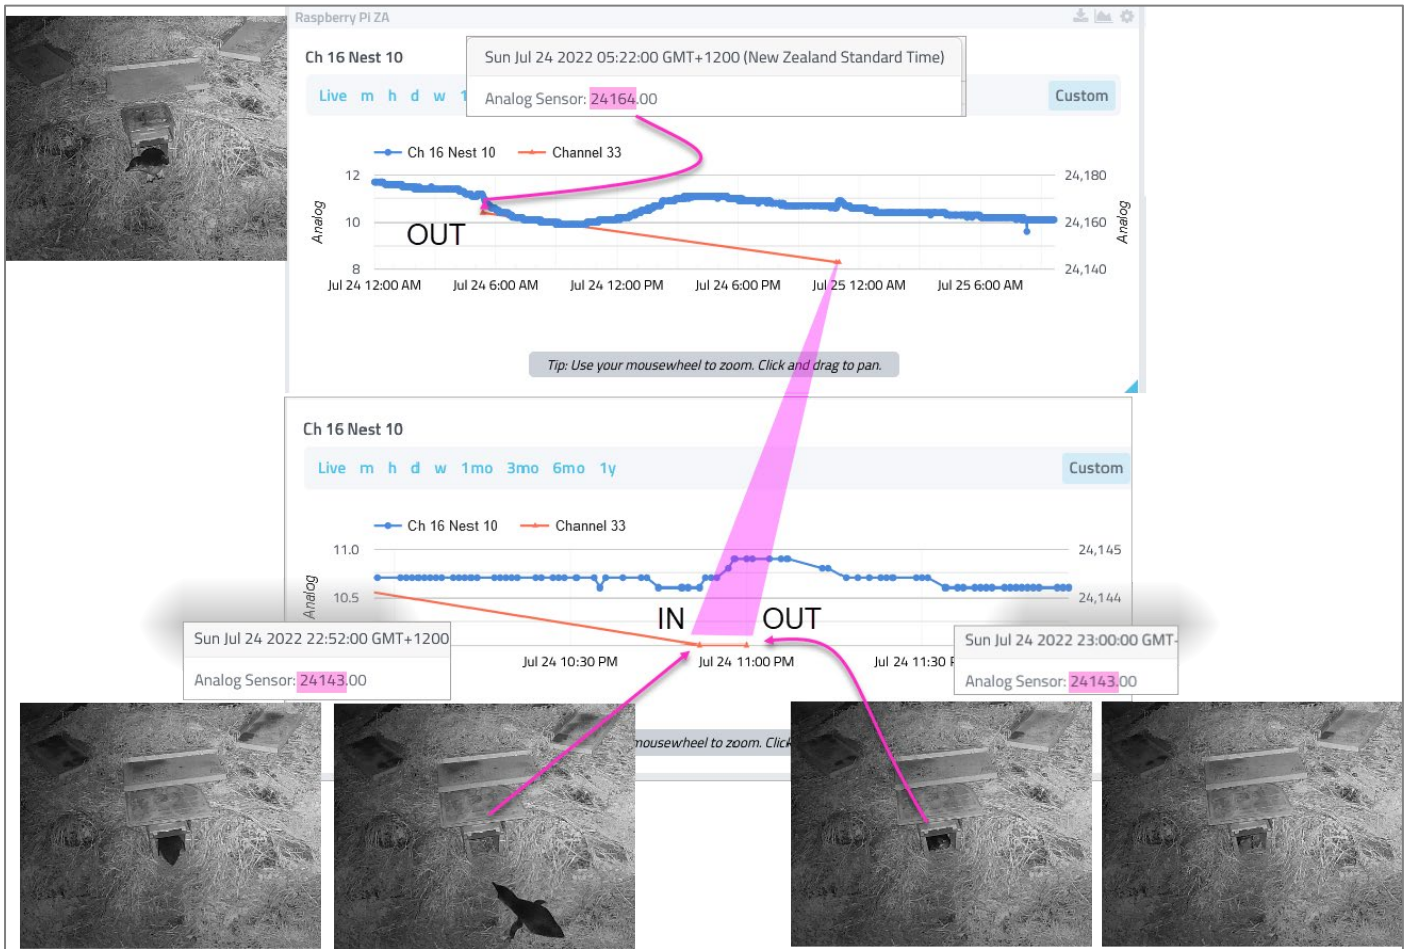

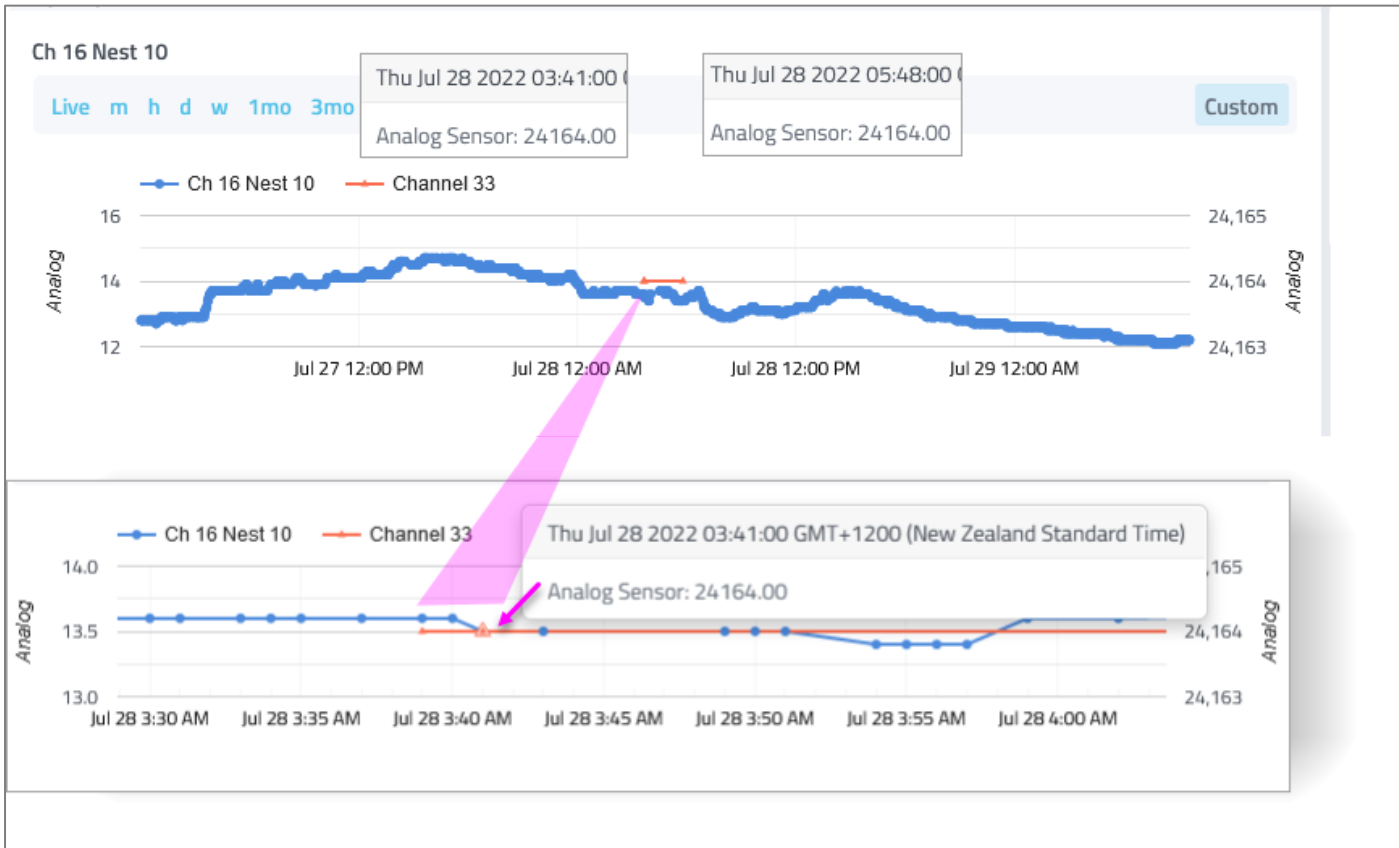

Whati appears – previously seen nest 18 in 2021

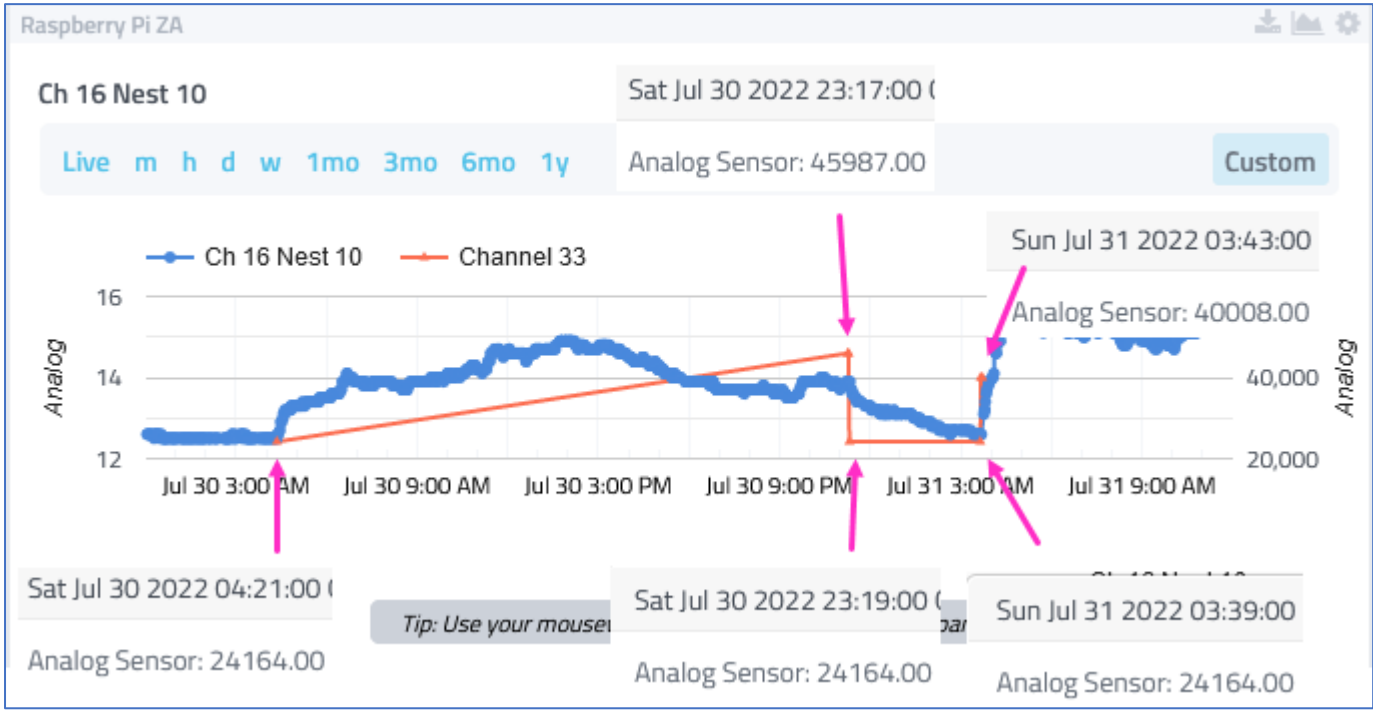

When two birds go in together then the RFID goes wild... adds them.

4008 appears

Tip: Use your mousewheel to zoom. Click and drag to pan.

Lots of activity – and RFID readings a bit confused by rapid movement

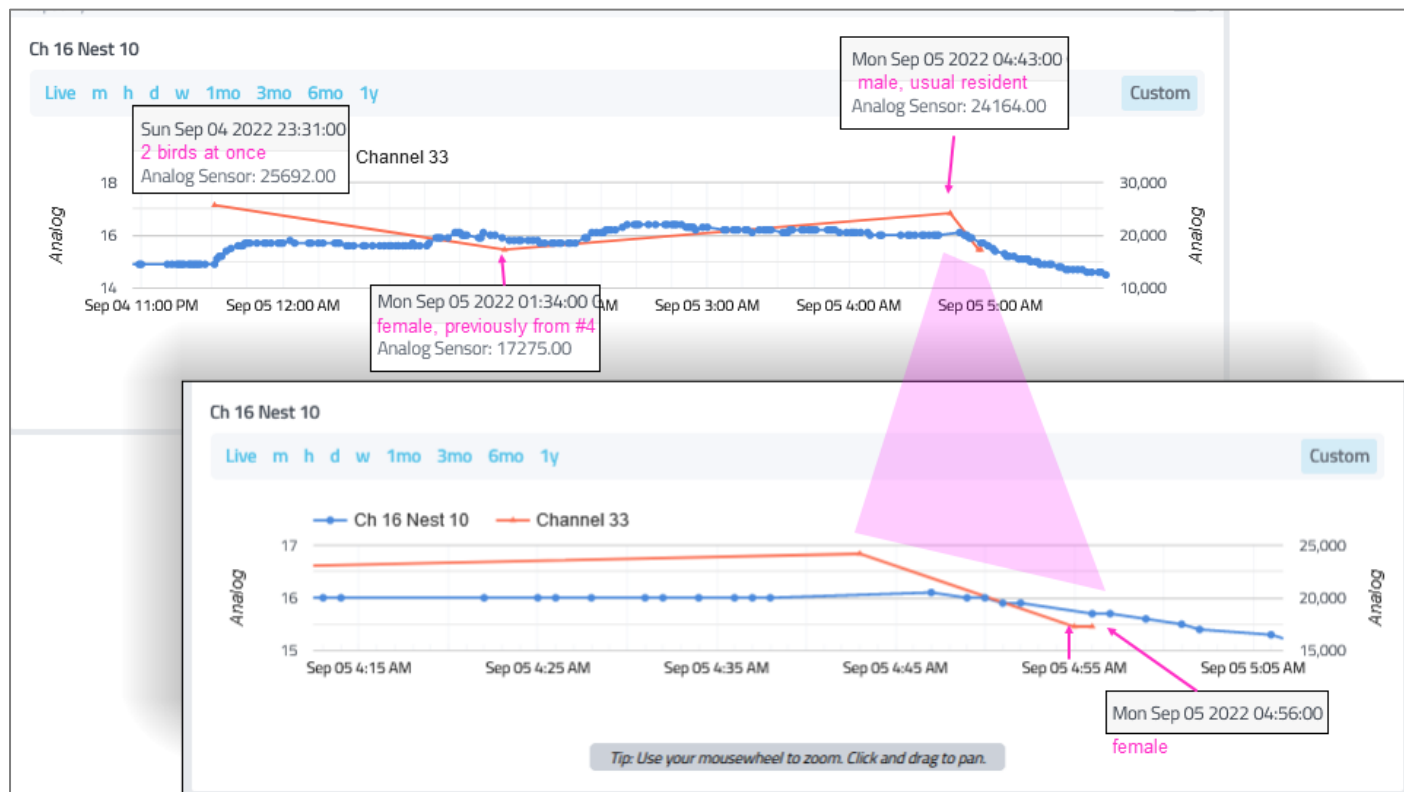

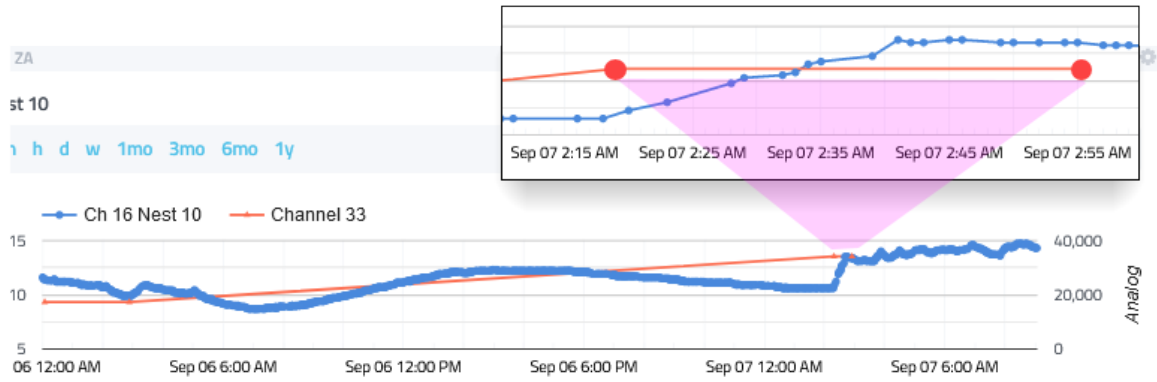

Some coverage

No activity with the RFID till 5th September

2022 09 07 Nest 10 RFID records

2022 09 07 02:18:36
